SUMMARY

Backend Software Engineer with experience building scalable and secure APIs using **Node.js, TypeScript**, etc and modern **cloud infrastructure**. Skilled in designing backend architectures, **integrating third-party services**, and optimizing database performance across **PostgreSQL, MongoDB**, and **Supabase** environments. Experienced with **CI/CD automation, cloud deployments, and API versioning** strategies that ensure system reliability and maintain backward compatibility for production applications. Passionate about building high-performance backend systems that scale reliably in real-world environments.

TECHNICAL SKILLS

Node.js (NestJS) & Express.js	Docker	MongoDB
Python	Api Testing(postman)	MySQL & PostgreSQL
C# (.NET)	Version Control(git)	Prisma & Redis
React and NextJS	NGINX	AWS & Azure
Rest-Api Development	Github Actions	Api Documentation & Testing
Agile Methodologies	SupabaseDB	
CI/CD Pipelines		
Terraform		

PERSONAL EXPERIENCES

- Built and maintained REST APIs in Node.js with TypeScript, where I had to integrate third-party services while also making sure the endpoints were stable enough for both client apps and internal teams I've also used GitHub Actions that handled testing, linting, and deployments.
- At one point, I automated a staging workflow that saved our team hours of manual redeploys Experience with systems that used PostgreSQL and MongoDB for event logs, switching between ORMs like Prisma, TypeORM, and Mongoose depending on the project Managed Jest for unit and integration testing, even wiring it into the CI/CD pipeline so every commit was validated before merging.
- Designed and enforced API versioning and backward-compatibility strategies, introducing versioned namespaces and legacy fallbacks to prevent breaking existing clients during incremental refactors and security hardening.
- Designed Lambda functions to work with PostgreSQL and MongoDB, handling connection reuse, cold-start considerations, and query efficiency to avoid performance degradation in serverless environments.

PROFESSIONAL EXPERIENCE

Software Engineer, Appnable

Nov 2025 – Present | Remote

- Developed and maintained backend and frontend services using Nextjs and Node.js, focusing on complex API logic and performance optimization.
- Managed database operations and authentication flows with Supabase, ensuring secure data handling and smooth integrations.
- Implemented CI/CD pipelines and automated deployments using GitHub Actions for consistent and reliable releases.
- Worked with Azure infrastructure for hosting, scaling, and managing application environments.
- Performed testing and debugging across services to improve stability, resolve production issues, and enhance overall system reliability.
- Contributed to backend services built with .NET (ASP.NET Core), working with controller-based APIs and integrating them with existing Node.js services in a multi-service environment.

Project Lead Developer, Sceptre (Freelance)**Apr 2024 - Nov 2025**

- Led product development and guided the technical direction of core features.
- Coordinated project tasks across development, design, and product teams to maintain smooth delivery
- Integrated APIs and backend services to enhance system performance and feature reliability.
- Reviewed code and development workflows to improve efficiency and maintain project standards.
- Facilitated communication between stakeholders and team members to ensure alignment and timely execution.

Software Engineer, Workbrook**Apr 2025 - May 2025**

- Participated in CodeBase reviews and assessed application structure to enhance overall efficiency.
- Provided feedback to improve both application functionality and workflow.

Network Security Intern, Tiger-Logic Africa**Mar 2024 - Sep 2024**

- Handled testing and setup of firewalls to meet security standards.
- Used technical skills to help reduce system errors.
- Tested firewalls to make sure they were safe and Compliant

Backend Developer, Timest Web**Aug 2024- Sep 2024**

- Developed and secured API endpoints using NestJS, ensuring they met industry and security standards.
- Identified and fixed backend issues, reducing system errors and improving overall performance.
- Conducted thorough testing to ensure APIs were reliable, safe, and compliant with best practices.

Backend Developer, Wish to Wear**Jan 2024 - Jul 2024**

- Designed and developed RESTful APIs to facilitate efficient client-server communication.
- Validated user inputs against the database using Express Validator to ensure data integrity and security.
- Led the API documentation process with Swagger, providing clear and comprehensive documentation for developers.
- Conducted thorough API testing using Postman to ensure functionality, reliability, and performance.

Full Stack Developer, Edge Tech**Jul 2023 - Jan 2024**

- Designed client-side and server-side architecture and codebase refactor.
- Integrated third-party APIs from external applications into web platforms.
- Created a RESTful API for a simple application or service. Focus on proper routing, authentication, and documentation with swagger.
- Worked on optimizing database queries, indexing, and overall database performance.

ADDITIONAL INFORMATION

- **Languages:** English.
- **Certifications:** Network+ Cybrary, CCNA 200-301 Network Fundamentals Simplilearn.
